

Bomgar Remote Support 16.1 Available Features

Features for Support Representatives

Feature Name	Description	
Multi-Platform Support	Customer	Representative
Windows	Windows Vista - Windows 10 Server 2003 - 2012 Windows POSReady 7 Windows Surface Pro 3	Windows Vista - Windows 10 Server 2003 - 2012 Windows Surface Pro 3
Mac OS X	OS X 10.6 - 10.11	OS X 10.7 - 10.11
Linux	Fedora 22 - 23 RedHat Enterprise 6 - 7 SLED 11 - 12 SLES 10 - 12 Ubuntu 14.04.1 - 15.10	RedHat Enterprise 6 - 7 SLED 11 - 12 SLES 10 - 12 Ubuntu 15.04 - 15.10
Mobile Devices	Apple iOS 8.0+ (iPhone, iPad, iPod touch) Android 4.0+ (Phone/Tablet) Android Dell Venue 8, 10 Android Dell 3000 4.0+ Android HTC 4.0+ Android Samsung 4.0+ (Phone/Tablet)	Apple iOS 8.0+ (iPhone, iPad, iPod touch) Android 4.0+ (Phone/Tablet) Android Dell Venue 8, 10 Android Dell 3000 4.0+ Android HTC 4.0+ Android Samsung 4.0+ (Phone/Tablet)
Virtual Machines	Citrix XenDesktop 7 (Windows 7) VMWare View 5 (Windows 7) VMWare Horizon 6 (Windows 7) Citrix XenApp 6.5 (Windows Server 2008)	Citrix XenDesktop 7 (Windows 7) VMWare View 5 (Windows 7) VMWare Horizon 6 (Windows 7) Citrix XenApp 6.5 (Windows Server 2008)
Virtual Appliances	vSphere 6.0 Hyper-V Server 2012 R2 New Windows Server 2012 R2 with Hyper-V role enabled New	
Attended Systems	Laptops, Desktops, Mobile Devices	
Unattended Systems	Laptops, Desktops, Servers, ATMs, Kiosks, POS Systems, Android etc.	
Network Devices	Routers, Switches and Devices via SSH/Telnet	
Multi-Language Support	View Bomgar applications and interfaces in English, German, Latin American Spanish, EU Spanish, Finnish, EU French, Italian, Dutch, Brazilian Portuguese, EU Portuguese, Swedish, Turkish, Japanese, Simplified Chinese, and Traditional Chinese. Bomgar supports international character sets.	
Support Toolset	Use advanced troubleshooting tools to interact with remote systems.	
3D Touch for iOS New	The Bomgar mobile representative console uses iOS 3D Touch Support capabilities offered by the 6s and 6s Plus devices to start sessions faster and more efficiently.	

Feature Name	Description
Annotations	While screen sharing, use annotation tools to draw on the remote user's screen. Drawing tools, including a free-form pen and scalable shapes, can aid in training remote users. The Annotations tool is also available during presentations.
Application Sharing	Allow customers to restrict screen sharing to specific applications.
Automatic Elevation Service	Pre-deploy the elevation service to automatically elevate the Bomgar customer client when ad-hoc sessions are started. This saves time in each session and enables reps to perform certain administrative tasks (via special actions and canned scripts) on end-user systems without giving full admin rights to each rep. It also allows you to leverage the Bomgar Smart Card driver in an ad-hoc session so that admin tasks can be performed using the rep's privileged account.
Bomgar Button	Deploy a "Get support" button on remote computers and mobile devices. Centrally manage and report on all deployed Bomgar Buttons.
Bomgar InSight	During a support session, an iOS or Android customer can stream live video to the representative from their access mobile device using Bomgar InSight. Sharing remote, live camera footage while an issue is taking place provides the representative with an additional way to assist the customer in finding a resolution to their problem. While viewing the footage, the representative can make video annotations, freezing the frame and allowing the customer to view the camera annotation and take any necessary action while camera sharing. Please see Remote Camera Sharing for Android and iOS .
Canned Scripts	Use pre-written scripts from either the Command Shell interface or the Screen Sharing interface, increasing session effectiveness.
Collaborative Browser Sharing	Use real-time interaction with remote customers by co-browsing the web without using a full-support screen-sharing session.
Command Shell	Directly access the command shell for system diagnostics, network troubleshooting, or low-bandwidth support, without screen sharing.
Custom Links	From within a session, click a button to open your browser to an associated CRM record or help desk ticket.
Custom Special Actions	Create representative console special action shortcuts for tasks specific to your environment, streamlining the effort for your team to complete repetitive tasks.
Customizable Rep Notifications	Granularly configure which events trigger alerts in the representative console and upload custom audio files.
Elevate Customer Client	Elevate the customer client to have administrative rights. Special actions can be run in the current user context or in system context.
Embedded Bomgar Button	Embed a Bomgar Button within applications deployed throughout your enterprise, giving your customers direct, streamlined access to remote support sessions.
File Transfer	Transfer files to and from the remote file system.
iCloud Access for Mobile Apps	During a support session, an iOS customer can share files from the iCloud Drive or any other document storage provider available from their mobile device.
Multi-Monitor Support	View multiple monitors on the remote desktop.
Multi-Session Support	Run multiple simultaneous support sessions.

Feature Name	Description
Peer-to-Peer Sessions New	Establish a direct connection between a support representative and an end-user, bypassing the appliance and thus enhancing the performance of screen sharing, file transfer, and remote shell.
Reboot/Auto-Reconnect ¹	Reboot and automatically reconnect to the remote computer. The end-user can specify login credentials.
Remote Registry Editor	Access and edit the remote Windows registry without requiring screen sharing.
Remote Screenshot	Capture a screenshot of the remote system.
Representative Console	Support remote computers, systems, and mobile devices through an interface designed specifically for support professionals and equipped with troubleshooting tools.
Restrict End-User Interaction ²	Disable the end-user's mouse and keyboard input to avoid customer interference. Account permissions determine whether the customer can or cannot see the screen while you are working.
Session Notes	Enter notes about support interactions. Session notes are accessible to collaborating representatives and appear in session reports.
Smart Card Support	In a support session, use authentication credentials contained on a smart card that physically resides on the representative's system. You must start the session using an elevated Jump Client, a Jumpoint, a local network Jump, or the Bomgar automatic elevation service.
SMS Session Start	Send a session key via SMS to begin a remote support session with a mobile device.
Special Actions	Access common actions such as Registry Editor, Event Viewer, System Restore, etc. Perform actions in User or System context.
System Generated Email Invites	Leverage the powerful Bomgar support session invitation email feature by sending email either through the representative's local email account or directly from a central email address. Even representatives without email access or representatives with enterprise email policy restrictions can send session emails.
System Information	View in-depth system information in an easily navigable interface. Interact with services and processes and uninstall software without requiring screen sharing.
Touch ID for iOS New	Log into the mobile representative console using iOS's Touch ID capabilities.
Training & Presentation	Give presentations to multiple attendees. In a support session, use Show My Screen to share your desktop with your customer.
View or Control	View or control remote computers, servers and mobile devices.
Virtual Pointer	Display a pointer on the customer's screen, even in view-only mode.
Wake-on-LAN	Remotely support computers, even when they are turned off. Send Wake-on-LAN packets to a Jump Client host to turn on that computer, if the capability is enabled on the computer and its network.
Collaboration	Work with other representatives and experts to resolve support cases.
Access Sponsor	Request a sponsor to elevate your permissions on the remote system by joining the session to enter credentials on your behalf.
Embassy	When supporting products or services provided by a third-party vendor, utilize the vendor's support resources.

Feature Name	Description
Equilibrium	Receive support session assignments based on comparative idle time and session load. Prioritize session routing automatically based on the areas of expertise covered by your representatives. By matching an issue to a skill set, you can prioritize the routing of support sessions to the best equipped representatives instead of merely the next available representative.
Extended Availability	Representatives can be in notification mode. If invited to share a session, you will receive an email notification.
Intelligent Collaboration	Resolve issues more effectively by quickly engaging support collaboration with additional representatives based upon both their skill-sets and their availability.
Queues	Accept support requests from team queues or a general queue. Your personal queue contains both your active and pending sessions.
Rep Invite	Invite anyone – internal or external – into a shared session with one-time, limited access.
Rep-to-Rep Screen Sharing	Collaborate with other representatives by instantly sharing your screen with a team member.
Session Sharing & Transfer	Collaborate with other representatives by sharing a session, or transfer a session to another representative or team.
Support Teams	Collaborate with other representatives who share similar skill sets or areas of expertise. Based on issue type or severity, a support request may be routed to a team specialized to handle such problems.
Jump Technology	Access unattended remote desktops, servers, and other systems.
Intel® vPro	Gain in-depth control of remote systems, using Intel® vPro features such as BIOS access, IDE-R, remote KVM, and remote power options.
Jump Client	Access any Windows, Mac, or Linux system. Add password-protection for security. Centrally manage and report on all deployed Jump Clients.
Scripted Jump	Automatically initiate a remote support session from an external program by launching a Jump Client on a remote computer.
Jumpoint	Access unattended Windows systems on a network, with no pre-installed client. Connect through proxy servers by storing credentials.
Jumpoint Clustering New	Cluster Jumpoints to provide redundancy and load-balancing.
Jump Shortcuts (Desktop and Mobile) New	Use Jump shortcuts for Local and Remote Jump, Shell Jump, RDP, and vPro to quickly access Jumpoints from the desktop or mobile version of the representative console. <i>Note: Jump Shortcuts are only available for Remote Jump and RDP in the mobile representative console.</i>
Jump Zone Proxy	Use a Jumpoint as a proxy to access systems on a remote network that do not have a native internet connection.
Microsoft Remote Desktop Protocol (RDP) Integration	Conduct remote desktop protocol (RDP) sessions through Bomgar, with no configuration of endpoints required. Representatives can collaborate in sessions, and sessions can be automatically audited and recorded.
Shell Jump	Connect to SSH/telnet-enabled network devices through a deployed Jumpoint.

Feature Name	Description
Chat and Messaging	Communicate easily with customers and other support personnel.
Click-to-Chat	Start support sessions with web-based chat, requiring no customer download. Sessions can be elevated if deeper support is needed.
Customer Client	Chat with customers during both support and training sessions.
Canned Messages	Access a library of chat responses to common questions.
Nudge Customer Client	Send audible and visual alerts through the customer client when end-user interaction is needed.
Spell Check	Catch misspellings and view suggested corrections.
URL/File Push	Push a URL through the chat interface to launch a browser on the remote computer. Pushing a file through the chat interface prompts the customer to accept the download.
Team Chat	Chat with all representatives on a team or with an individual.

Features for Remote Support Representatives

Features for Support Managers

Feature	Description
Support Portal	Define and automate customer interaction.
Agreements/Messages	Customize messages for each portal. Options include: Customer Legal Agreement, Customer Greeting, On Hold Message, Orphaned Session Message, and Redirect URL.
Bomgar Button	Customize Bomgar's single-click "Get support" icon.
Click-to-Chat	Brand Bomgar's no-download, web-based chat option.
Connection Options	Define how sessions begin for each portal: Representative List, Presentation List, Session Keys, Issue Submission, Click-to-Chat.
Customer Client	Customize the branding and behavior of the Bomgar customer client, which is used by customers in remote sessions.
Exit Surveys	Monitor customer satisfaction, and require representative comments on support sessions.
HTML Template	Edit the HTML of the public site, uploading linked files to the file store.
Apple iOS Configuration Profiles	Offer public or private, administrator-configured profiles to Apple iOS device users.
Customer Downloads	Provide links for the customer to download the chat transcript and a video of the screen sharing session.
Customer Notices	Post important notifications to the top of your support portal, additionally pushing these messages to all active customer clients.
Embedded Bomgar Button	Embed a Bomgar Button within applications deployed throughout your enterprise, giving your customers direct, streamlined access to remote support sessions.
Feedback to Customers in Queue	Provide real-time status updates to waiting customers, informing them of their position in queue and the estimated wait time.
Multi-Language Support	View Bomgar applications and interfaces in English, German, Latin American Spanish, EU Spanish, Finnish, EU French, Italian, Dutch, Brazilian Portuguese, EU Portuguese, Swedish, Turkish, Japanese, Simplified Chinese, and Traditional Chinese. Bomgar supports international character sets.
Post-Session Redirect	Define a URL to automatically open when a customer exits a session.
Support Workflow	Use the representative survey to create detailed workflows, allowing representatives to complete the survey and follow up on steps provided by the administrator while the session is live.
User Management	Centrally manage users and groups.
Access Sponsor	Allow a lower tier representative to gain elevated privileges by requesting a sponsor to join the session to enter credentials on their behalf.
Administrative Dashboard	Oversee team support activity, monitor representatives' sessions or desktops, and take over or transfer sessions owned by someone else. See which team members are available to take sessions, are idle, are busy, or have session assignment disabled.
Configurable Login Banner	Configure a banner to display before users can log into either the /login interface or the /appliance interface. If the banner is enabled, then users attempting to access either /login or /appliance must agree to the rules and restrictions you specify before being allowed to log in.

Feature	Description
Delegated Password Administration	Delegate the task of resetting local users' passwords to privileged users, without also granting full administrator permissions.
Embassy (External Support Teams)	Grant limited access to teams of vendors to receive support or utilize vendors' resources in support calls.
Group Policies	Define Bomgar user account permissions for entire groups of users. Group policies integrate easily with external directory stores to assign permissions based on your existing structures.
Inactive Session Timeout	Remove an idle representative from a support session after a specified time of inactivity.
License Monitoring	Receive email alerts on license usage and run reports on peak license utilization.
License Pools	License pools provide expanded flexibility to license management. Configure pools to reflect the structure of your support organization and ensure that each pool has the exact licenses to which it is entitled.
Message Broadcast	Send a pop-up message to all users logged into the representative console.
Two Factor Authentication New	Implement native two factor authentication using a secure second factor access code that is emailed to a user.
Multiple /appliance User Accounts	Create multiple user accounts for the /appliance interface. Set rules regarding account lockouts and password requirements.
Rep Console Device Verification	Enforce the networks on which your representative consoles may be used, or require two factor authentication to log into the representative console.
Rep Invite	Create profiles so that representatives can invite anyone – internal or external – into a shared session with one-time, limited access.
Rep Login Schedule	Exert control over access to the representative console, restricting when representatives can be logged into the representative console.
Restrict Rep Access to Customer Client	To strengthen security, prevent representatives from interacting with the customer client while screen sharing.
Separate Display Names for Reps	Protect representatives' privacy by allowing them to set two display names – one for internal use and one for external use.
Session Permission Policies	Customize support session security permissions to fit specific support scenarios, not just specific representatives. You can change the permissions allowed in a support session based on the support portal the customer came through or even the specific endpoint being supported. Session permission policies provide flexibility in building the security model for each specific support scenario.
Support Teams	Create support teams based on skill set or experience level.
Team Collaboration	Define how multiple teams may interact.
Templates	Copy an existing security provider, session policy, or group policy to create a new object with similar settings. You also can export a session policy or group policy and import those permissions into a policy on another site.
User Accounts	Create an unlimited number of named rep accounts.
User Account Details Reporting	Export account information about your representatives for auditing purposes.
User Collaboration	Define support session sharing and transfer options.

Feature	Description
Routing Automation	Automate routing of support requests, and balance support load.
Automatic Session Distribution	Quickly and effectively route support sessions to the most appropriately skilled representative.
Equilibrium	Receive support session assignments based on comparative idle time and session load. Prioritize session routing automatically based on the areas of expertise covered by your representatives. Alert representatives of sessions with high wait times or route overdue sessions to overflow queues.
Intelligent Collaboration	Resolve issues more effectively by quickly engaging support collaboration with additional representatives based upon both their skill-sets and their availability.
Issue Submission	Implement issue submission on your public site to direct support requests to the team designated to handle the selected issue.
Persistent Queue	Allow queues to be available for customer sessions to start even when no representatives are available. This provides additional flexibility for custom session routing management.
Queues	Assign issues to support teams so that customers facing a particular type of problem will be routed to the correct team queue.
Support Toolset	Equip your support representatives on a user, team, or site basis.
Canned Messages	Store responses to common questions to help representatives be more efficient and consistent while chatting with customers.
Canned Scripts and Custom Special Actions	Create command shell scripts and custom special actions for representatives to run during sessions, increasing efficiency by automating common processes.
Centralized Rep Console Settings	Define the representative console settings for your entire help desk. Enforce settings to ensure a consistent support experience.
Jump Technology	Define rules for remote access to unattended systems. Set expiration dates for Jumpoints. Create Jump Policies to enforce when Jump Items can be accessed.
Post Session Lock	Set the customer client to automatically lock or log out the remote Windows computer when an elevated support session ends.
Representative Permissions	Restrict or enable toolset components (ex., View or Control, File Transfer, System Information, Reboot, etc.)
Reports	Report on all session activity; customize, filter and export reports.
Reporting Permissions	Manage each user's reporting privileges.
Support Session Reports	View details of each support session, including a complete chat transcript, permissions requested, and files transferred.
Session Recording Videos	Record annotated videos of support sessions, show my screen sessions, command shell sessions, and presentations.
Support Summary Reports	See an overview of support activity over time, categorized by representative, team, or public site.
Exit Survey Reports	Monitor customer and representative surveys.
Team and Embassy Reports	View details of activity within a team or embassy, including login and logout times, team chats, and files shared.
License Usage Reports	Run reports to view peak usage of Bomgar licenses.

Features for Support Managers

Features for System Administrators

Feature	Description
Mass Deployment	Install Bomgar applications on multiple systems simultaneously
BES-Deployable Bomgar Buttons	Mass deploy Bomgar Buttons on BlackBerry® Smartphones via the BlackBerry® Enterprise Server (BES).
Extractable Rep Console	Download a mass-deployable representative console to distribute to representatives prior to or in parallel with upgrading the Bomgar Appliance.
Mass Deployment Installers	Create mass deployable installer packages for Representative Consoles and Jump Clients (Windows and Mac). Also create MSI packages for Session Recording Viewers and Bomgar Buttons (Windows only).
Mass Import of Jump Shortcuts New	Import and configure large numbers of Jump shortcuts.
Identity Management	Define Bomgar accounts using existing data on directory servers.
LDAP/Active Directory	Use LDAP/Active Directory to manage Bomgar users.
RADIUS [Multifactor]	Use RADIUS for two factor authentication.
Kerberos [Single Sign-on]	Use Kerberos for single sign-on.
SAML [Single Sign-on] New	Use SAML with an Identity Provider to authenticate Bomgar users.
Backup and Redundancy	Monitor and back up the Bomgar Appliance.
Appliance Failover	Define and automate redundancy and failover options.
Automatic Installation of Critical Updates	Set up your Bomgar Appliance to automatically install critical updates.
Bomgar Atlas Cluster Technology	Use one Bomgar site across multiple Bomgar Appliances to enhance responsiveness across wide geographic deployments.
Backup Integration Client	Schedule automatic retrieval and storage of software backups.
NIC Teaming	Combine your system's physical network interface controllers (NICs) into a single logical interface, adding an additional layer of fault tolerance for your Bomgar Appliance.
Integration	Integrate Bomgar with external systems.
API	Integrate with external systems and set API permissions.
Custom Fields	Create custom API fields to gather information about your customer, enabling you to more deeply integrate Bomgar into your support center. You can also make fields and their values visible in the representative console.
Custom Links	Configure custom links to include a variable for a session's external key, pointing the URL to an associated CRM record or help desk ticket. A representative can access this link from within a session.
Embedded Remote App Support for Android and iOS	Embed Bomgar remote support technology in your iOS and Android applications to support your mobile applications remotely.
Integration Client	Transfer session logs, session recordings, and software backups from the Bomgar Appliance to an external system. Supported systems are Windows-based file systems and Microsoft SQL server. Schedule data transfers to take place automatically.

Feature	Description
Real-Time Reporting API	Gain more efficient, comprehensive reporting through Real-time Dashboard and Representative Activity Reporting. Develop deep, real-time reporting to quickly analyze support center activity in your organization. Report on support representative activity regardless of whether they are in a support session or not, with metrics such as time available, busy, in concurrent sessions, etc.
SNMP Monitoring	Monitor the Bomgar Appliance using Simple Network Management Protocol (SNMP).
Syslog Integration	Send log messages to an external syslog server.

Features for System Administrators

Additional Integration Options

Additional integration options are available to Bomgar customers, as well. Some integrations must be purchased separately from the Bomgar software. Contact Bomgar Sales for details.

Integration Option	Requirements
<p>Service Desk/Systems Management Integrations</p> <p>Automate your integration of Bomgar with various service desk and systems management tools by requesting pre-packaged integration adapters, drastically reducing integration time.</p>	Bomgar-Maintained Integrations
	Autotask
	BMC Footprints
	BMC Remedy 7.6.04 SP2+
	BMC Remedyforce
	CA Service Desk
	Dell KACE
	Heat
	HP Service Manager 7.0+
	Microsoft Dynamics CRM
	Salesforce.com
	ServiceNow
	Zendesk
	3rd Party Integrations
	BMC ServiceDesk Express
Cherwell	
Hornbill	
iSupport	
TOPdesk	
SunView ChangeGear	
<p>CRM/Ticketing Integration</p> <p>Use the Bomgar API to create a simple integration between your CRM or ticketing system and Bomgar, allowing support reps to access a CRM record or help desk ticket directly from the Bomgar Representative Console.</p>	<p>Bomgar API 1.7.0+</p> <p>For a list of which API versions correspond with which Bomgar software versions, see www.bomgar.com/docs/remote-support/how-to/integrations/api/api-version-reference.htm</p>
<p>3rd Party Professional Integration Services</p> <p>Because Bomgar’s API and Integration Client conform to industry protocols, it is possible for customers to contract with a third-party professional services provider to outsource integration needs.</p>	Contact Bomgar Sales for References.
<p>Bomgar Professional Services</p> <p>Contract with Bomgar for custom integration needs.</p>	Contact Bomgar Sales.

Additional Integration Options for Bomgar

¹Reboot/Auto-reconnect is not supported on Mac computers.

²Restrict End-User Interaction is limited to disabling the mouse and keyboard on Windows 8 and above. From a mobile rep console, Restrict End-User Interaction is limited to fully disabling the mouse, keyboard, and screen display.
