Bomgar Vault 17.2 Major Release

Feature
Enhanced Installation Streamlined settings allow for easy configuration of the Bomgar Vault site and initial Bomgar Vault user during installation.
Revamped Discovery Tool Discover privileged accounts on your network using the Bomgar Vault Discovery Tool. The improved interface allows you to seamlessly navigate through the discovery process, easily filter results, and quickly export findings into a CSV.
Updated Navigation The Bomgar Vault user interface has a new and easy-to-read top navigation and step navigation, which allows you to click between pages and steps within the application.
SSH Key Rotation Use Bomgar Vault to rotate SSH keys within your network to ensure your most critical systems are secure.

Enhanced Installation

Streamlined settings allow for easy configuration of the Bomgar Vault site and initial Bomgar Vault user during installation.

The screenshot shows the Bomgar Vault installation settings window. The window title bar displays "BOMGAR™ VAULT" and standard window controls. The main content area is titled "Bomgar Vault settings" and contains the following fields:

- Installation directory:** A text box containing "C:\Program Files\BomgarVault" with a browse button (three dots) to its right.
- Vault website FQDN:** A text box containing "example.com".
- Vault URL:** A text box containing "https://example.com/BomgarVault".
- IIS Settings:**
 - IIS Application name:** A text box containing "BomgarVault".
 - Application pool:** A dropdown menu with "New" selected.
 - Application Pool Name:** A text box containing "BomgarVault".
- Security for IIS and services:**
 - Account type:** A dropdown menu with "Local System" selected.

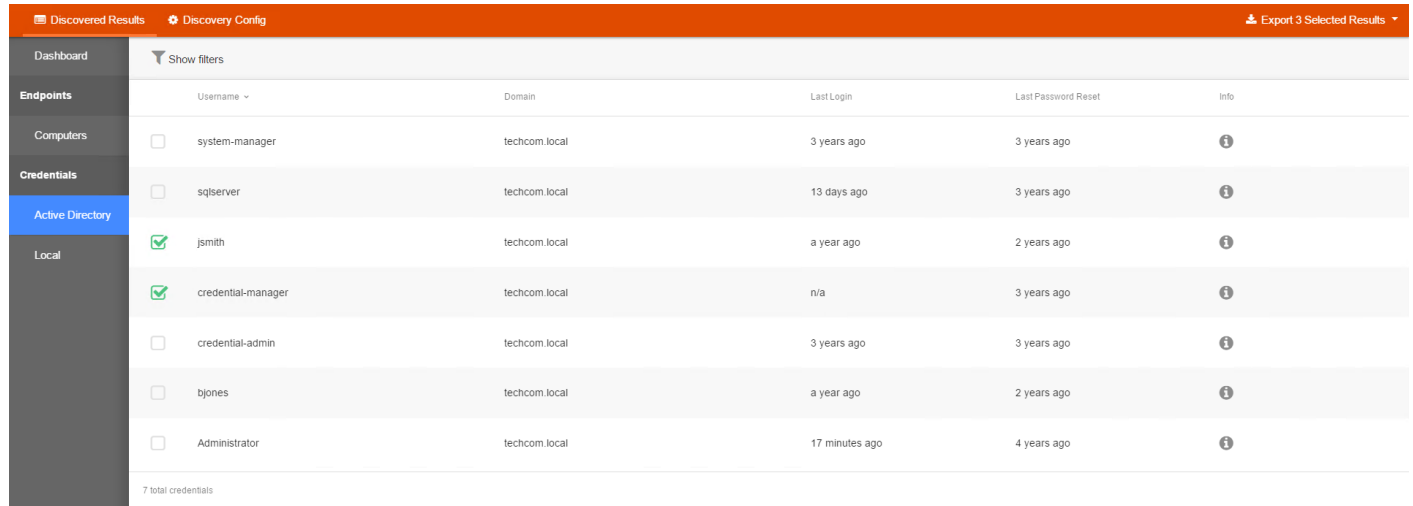

At the bottom of the window, there are three buttons: "Back" (orange), "Exit" (dark blue), and "Next" (orange).

Revamped Discovery Tool

Discover privileged accounts on your network using the Bomgar Vault Discovery Tool. The improved interface allows you to seamlessly navigate through the discovery process, easily filter results, and quickly export findings into a CSV.

The screenshot shows the Bomgar Vault Discovery Tool interface. At the top, there are tabs for "Discovered Results" and "Discovery Config", and a button to "Export 3 Selected Results". A sidebar on the left contains navigation options: "Dashboard", "Endpoints", "Computers", "Credentials", "Active Directory", and "Local". The main area displays a table of discovered credentials with columns for Username, Domain, Last Login, Last Password Reset, and Info. The table lists several accounts, including system-manager, sqlserver, jsmith, credential-manager, credential-admin, bjones, and Administrator. The "Active Directory" section is currently selected in the sidebar.

Username	Domain	Last Login	Last Password Reset	Info
<input type="checkbox"/> system-manager	techcom.local	3 years ago	3 years ago	i
<input type="checkbox"/> sqlserver	techcom.local	13 days ago	3 years ago	i
<input checked="" type="checkbox"/> jsmith	techcom.local	a year ago	2 years ago	i
<input checked="" type="checkbox"/> credential-manager	techcom.local	n/a	3 years ago	i
<input type="checkbox"/> credential-admin	techcom.local	3 years ago	3 years ago	i
<input type="checkbox"/> bjones	techcom.local	a year ago	2 years ago	i
<input type="checkbox"/> Administrator	techcom.local	17 minutes ago	4 years ago	i

7 total credentials
